

# Faster Response to Threats. Better Security Accountability.

As businesses continue to adopt agile methodologies for development and operations, security teams are facing increasing pressure to understand the up-to-the-second state of the organization's security posture in order to keep up with the rapid rate of change. Meanwhile, a continual flood of security alerts from your existing toolset takes longer to resolve due to inefficient processes, poor collaboration, or just a lack of buy-in from other teams. Cloud adoption adds yet another stressor, as the attack surface of the organization increases and risk of cyber threats multiply.

With PagerDuty's platform for real-time operations, you can bring together the right context by collecting signals from across your operational toolchain, and engage with the right people across security, development, and operations. PagerDuty enables each team to drive real-time action from the signals that matter and, ultimately, to share security accountability with a DevSecOps mindset.

*"PagerDuty helps us stay on top of our security posture and resolve security incidents faster and more consistently."*

— Zane Lackey, Chief Security Officer

*"Because of PagerDuty, we were able to connect a security engineer with our engineers within minutes. That's solid gold. That's where we have to be."*

— Andrew Becherer, Chief Security Officer

### Hub for Secure Digital Operations

Drive efficiency through consistent processes and improved awareness.

### Faster Resolution to Improve Security Hygiene

Tighten the feedback loop on critical security vulnerabilities and spend less time on manual tasks.

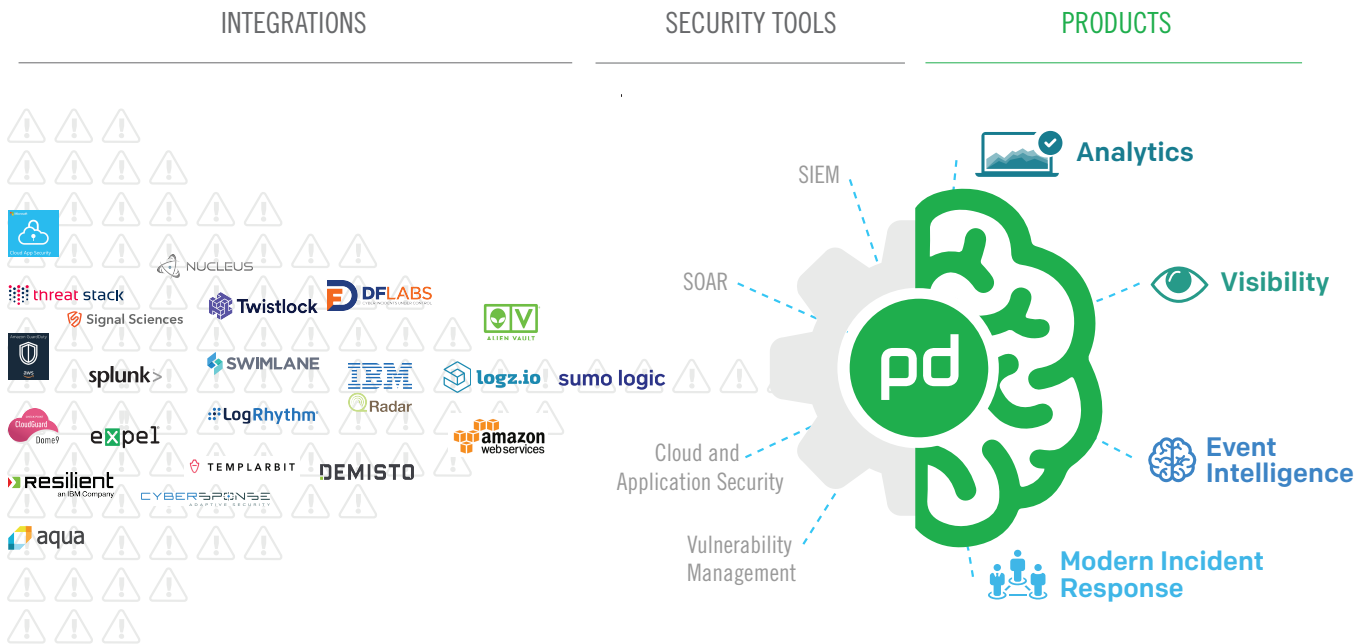

### Shared Security Accountability

Transform your organization by making security everyone's job.

# PagerDuty Integration Ecosystem for SecOps

Using **PagerDuty for Security Ops**, security teams can leverage the same reliable platform that development and operations teams already depend on, improving cross-team visibility and reducing friction for collaboration. Additionally, PagerDuty's rich ecosystem of security partners ensures that teams can be successful with their existing tools across Cloud Security, Application Security, SIEM, SOAR, Vulnerability Management, and more.

*“ Our partnership with PagerDuty ensures security teams can effectively and continuously monitor their applications and cloud infrastructures for potential threats and anomalous activity without impacting the customer experience.”*

— Jabari Norton, VP Global Partner Sales & Alliances
